Get ready for GRESB

Would you like to make your building portfolio more sustainable? How nice would it be to score higher during your GRESB assessment? hello energy is here to help you achieve those goals.

What is GRESB?

As the leading ESG benchmark for real estate assets, GRESB assesses the sustainability performance of real estate portfolios worldwide. hello energy helps you to improve your energy and sustainability management, providing data to support your GRESB validation, scoring and benchmarking. The GRESB assessment requires real estate companies and property developers to report on their entire portfolio. hello energy can advise you how to get all your portfolio assets up to par according to the GRESB certification standards, but also for other green building certifications like WELL and BREEAM.

What is hello energy?

hello energy helps companies put their sustainable investments in the limelight. We tell a story about the energy and sustainability data of the building. We use visualisations that anyone can understand, and that allows your stakeholders to behave more sustainably. This way, your investments aren't only sustainable, they are truly impactful. How hello energy helps real estate companies become winners:

→ **Get ahead and stay ahead of the game**

Earn credits for multiple certifications such as BREEAM, GRESB and WELL

→ **Improve your investor value**

Green investments just make sense. Don't be late to the party.

→ **Boost your building's performance**

Run your real estate smoothly and align people with your processes.

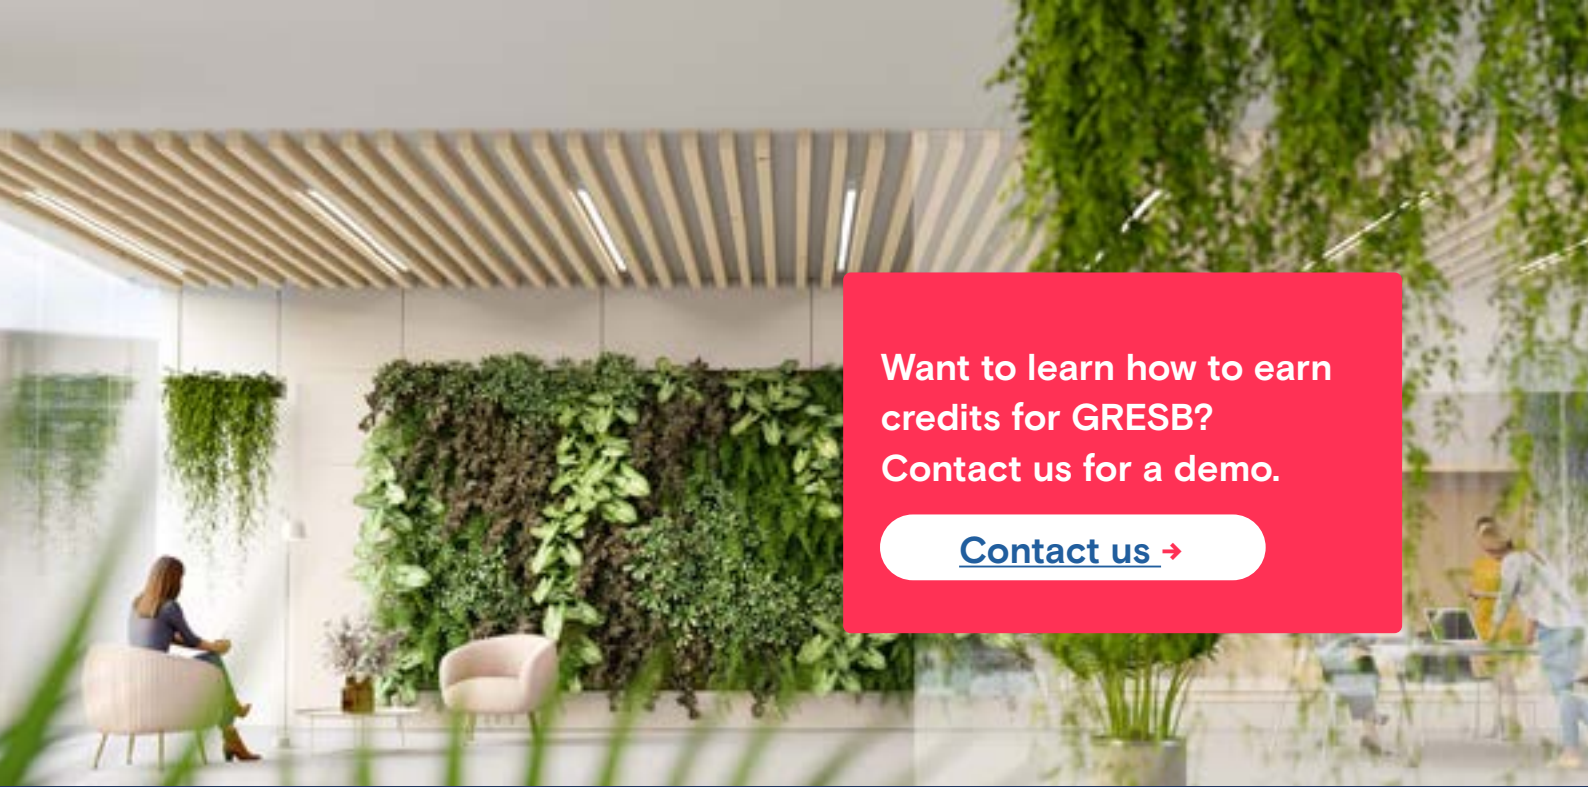

→ **Engage your audience with actionable insights**

It's what is needed to get everyone on board.

→ **Unlock the power of data**

Better ESG reporting and 100% data coverage worldwide, and smart data drives better decisions.
